* **Galvanized steel:** The preferred coated steel for use in architectural applications.
 • Coated in zinc, heated to over 1000° F so iron is pulled from steel.
 • Iron mixes with zinc coating, making it harder, more scratch-resistant, uniform appearance.
 • Galvanized steel bonds better with paint, and it is better for welding.

** **316 SS** contains 2%-3% molybdenum, added to improve corrosion resistance to chlorides (like sea water).
304 SS has no molybdenum
