*Galvannealed steel: The preferred coated steel for use in architectural applications.
Coated in zinc, heated to over 1000° F so iron is pulled from steel.
Iron mixes with zinc coating, making it harder, more scratch-resistant, uniform appearance.
Galvannealed steel bonds better with paint, and it is better for welding.

**SS 316 contains 2%-3% molybdenum, added to improve corrosion resistance to chlorides (like sea water).
304 SS has no molybdenum
